7. Project Documentation Phase

Project Title

Implement Client Script & UI Policy (Incident)

Project Documentation

The project documentation provides complete information about the implementation of Client Script and UI Policy in the ServiceNow Incident application.

The documentation includes the project requirements, design, implementation steps, configuration details, testing results, and screenshots of the implemented features.

Documentation Contents

Project Overview

The project implements Client Script and UI Policy on the Incident form to control field behaviour based on specified conditions.

Client Script Documentation

The Client Script configuration, conditions, form event, and script used in the project are documented.

UI Policy Documentation

The UI Policy configuration and the field behaviours such as mandatory, visible, and read-only are documented.

Implementation Screenshots

Screenshots of the Incident form, Client Script configuration, and UI Policy configuration are included to show the implemented features.

Testing Documentation

The test cases and their results are documented to verify that the Client Script and UI Policy work correctly.

Project Files

All necessary project-related files and documents are maintained in the GitHub repository.

Expected Outcome

The documentation provides a clear record of the complete project implementation and helps users understand how the Client Script and UI Policy were configured and tested in the Incident application.
